

COMBINED COMPETENCE MÜNZING EXPANDS PRODUCT PORTFOLIO

 **LUBA-print**
L.P. Bader & Co. GmbH

DEUREX[®]

Micro round waxes for macro quality

Dear customers and business partners,

Hans-Hugo Bremkamp
Managing Director

In line with the clearly defined growth strategy MÜNZING CHEMIE has considerably expanded its product portfolio in the field of wax additives by acquiring DEUREX Micro Technologies GmbH. This meets our intention – "competence from one source".

We strive to offer our customers the perfect product for every application. Already in 2009 we integrated L.P. Bader & Co. GmbH, the specialist for high quality wax dispersions, into the MÜNZING Group. By acquiring the DEUREX business of micronized waxes with spherical particles we complete our product range and strengthen our market position.

"Research and development guarantee our future"

Research and development are keys to guarantee technological leadership and the independence of the MÜNZING Group as a privately owned business. All our R & D activities are aimed at the needs of our customers and markets. Development of new and efficient additives, continuous optimization of existing products as well as the cooperation with research groups and customers secure a strong market position of MÜNZING. Especially during the worldwide crises in 2009/2010 our R & D efforts were even increased to more than 5% of MÜNZING's turnover.

Utilizing the synergies from bringing together considerable expertise will not only create new products but also new applications for our additives. "Please challenge us with your requirements."

From Bader to MÜNZING

As in the past **MÜNZING Liquid Technologies GmbH** with its brand **LUBA-print** is a synonym for highest quality and service in the field of wax dispersions for coatings and printing inks and it is highly experienced in formulating, producing and applying these additives. The

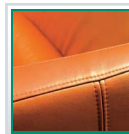

products are based on natural and synthetic waxes, they are manufactured according to state-of-the-art production methods and are easy to handle. They are used to improve the surface properties of paints and coatings.

From DEUREX to MÜNZING

MÜNZING Micro Technologies GmbH is the leading producer of round and micronized waxes for a wide range of applications. By means of a specially developed technology spherical wax particles are produced with a very even and narrow particle size distribution. The round shape of the particles provides the

surface additives with special properties such as e.g. reduced development of dust and easy dispersibility. Furthermore, the particles can be coated which leads to additional functionalities. These products are distributed under the brand name **DEUREX**.

MÜNZING – Globally represented

„Creating Additive Value is a synonym for exceptional service for our customers“

Our application technology laboratories are of great importance to support the development of new additives by testing them under practical conditions. Above all, our facilities are available to our customers to solve arising problems or to improve existing applications and procedures as well as to develop innovative products. Well-trained and highly motivated employees as well as functionally equipped laboratories are available at our sites in Heilbronn, Rottweil and Elsteraue (Germany) as well as in Bloomfield (USA) and Shanghai (China).

Founded in 1830 MÜNZING is one of the oldest privately owned chemical companies

The company headquarters are in Heilbronn, Germany. Today MÜNZING is represented in more than 30 countries worldwide. Production plants are located in Europe, North America and China. The business is privately owned for six generations.
